

Welcome to our Latest Release, 3.3.8!

Advancements in QVscribe marking processes allow you to customize how you evaluate your requirements.

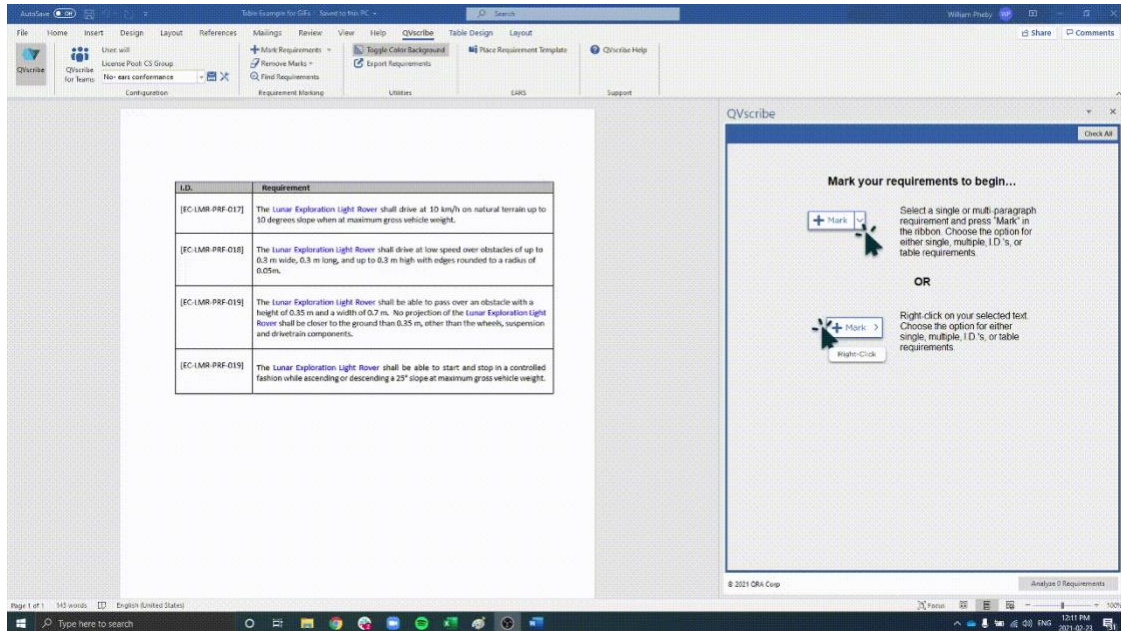

QVscribe for Word – Key Update

Custom Table Marking

Based on customer feedback, we have improved how you can mark tables in QVscribe for Word. You can customize how you mark

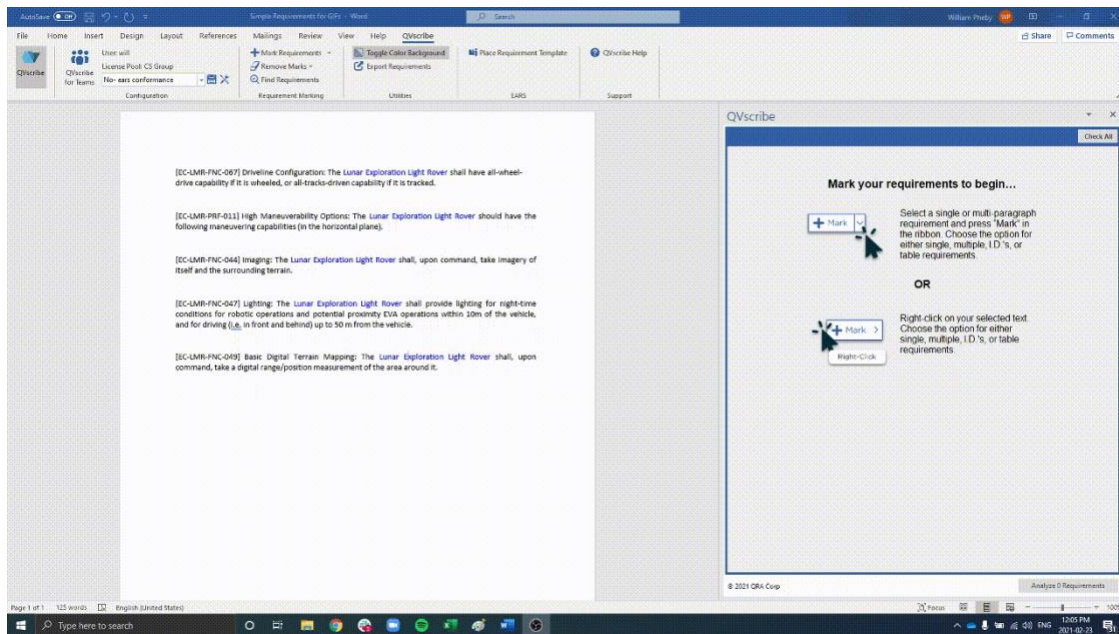

requirements in tables. You will have the option to mark by column, row, or the entire table. QVscribe will also ask if your table has a requirement ID column to better differentiate requirements from other content in your document.

Other Marking Improvements

We have improved our marking process in QVscribe for Word, you can now right-click directly on your requirements for options. The options available will highlight. You will have the following options:

- Mark Single Requirement
- Mark Requirement Per Paragraph
- Mark Requirement Column
- Mark Requirement Row
- Mark Entire Table as Single Requirement

General Performance Improvements

We have improved the analysis performance for speed and accuracy to account for the additional analyses.

QVscribe for Jama

QVscribe for Jama allows users to perform quality, consistency and similarity analysis directly within the Jama user interface. This allows authors and stakeholders to reduce errors, improve productivity and reduce overall project costs **all managed within your security infrastructure.**
