

# Software experience optimized for *your success.*

Enhancements are at the center of QVscribe 4.1. We've received your input and are elevating your requirement authoring process through improvements we have implemented with this new update.

## What's New for Polarion, DOORS Next and Jama

The following improvements have been implemented:

- Differentiate between Quality Score issues and Quality Warnings on the individual requirements page with the addition of tagging in the QVscribe PDF report
- Users can now change the default name/file path for reports
- PDF reports will now have corresponding Requirement ID's
- Usability, design and workflow improvements
- A browser refresh is no longer necessary for the QVscribe icons to appear after initializing the QVscribe browser extension

## What's New for Word and Excel

The following improvements have been implemented:

- Differentiate between Quality Score issues and Quality Warnings on the individual requirements page with the addition of tagging in the QVscribe PDF report
- EARS Template will display in analysis when using “Reanalyze Selected”
- Authors can mark filtered rows in Excel to perform analysis only on the cells that were visible when the marks were added
- Configurations in QVscribe for Individuals will preserve a copy of the previous version when a configuration is updated
- Streamlined editing mode, the functionality of each button is now clearly marked
- UI and back-end improvements for clarity

## More Resources

QVscribe remains a product focused on customer success, which is why we want to hear from you. Reach out to [support@qracorp.com](mailto:support@qracorp.com) if you experience any issues, have a question, or if there are new features you'd like to see introduced to QVscribe.
