

QVscribe's New Requirement Guidance

Effortlessly and efficiently correct your problem requirements with the help of QVscribe's integrated requirement guidance.

- Recommendations now appear while editing a problem requirement, guiding authors on the requirement improvement process.
- You will now receive examples of correct and incorrect requirements, making it easy to learn from mistakes and quickly create the highest quality requirements.

● QUALITY SCORE | NEGATIVE IMPERATIVES

shall not

Work towards a unitary requirement by including one requirement stating what needs to happen instead of describing what needs to not happen by using negative imperatives such as "shall not" and "is not required to".

Incorrect Example The Smart Door Bell **shall not** impact the function of the existing Analog Wired Chime.

Correct Example Where an Analog Wired Chime is connected to the Smart Door Bell, when the Door Chime alert is sent, the Alert System **shall** activate the Analog Wired Chime.
